**Just Manufacturing is Offering New Products for Infection Control Programs
Copper Sinks, Fixtures and Hand Wash Stations made with CuVerro® Antimicrobial Copper Surfaces**

Franklin Park, Illinois – February 1, 2012 — Just Manufacturing is pleased to announce the expansion of our healthcare products line with the addition of sinks, hand wash stations and fixtures made with CuVerro® Antimicrobial Copper Surfaces.

One of the most frustrating problems professionals in *Infection Control* and *Epidemiology* face is how to prevent hospital-acquired infections. More public and health care environments supplement current infection and disease control practices with antimicrobial copper, antibacterial products, hospital sinks, hand wash sinks and scrub sinks.

CuVerro® Antimicrobial Copper Nickel surfaces are attractive, safe to use and never wear or wash away. Copper is the only active, bacteria-killing ingredient in CuVerro alloys. EPA-registered CuVerro surfaces, begin killing pathogens* on contact, killing 99.9% within two hours, and keep on killing 24/7.

Just Manufacturing healthcare products made with CuVerro® Antimicrobial Copper Surfaces include: Healthcare Fixtures, Scrub Sinks, Sinks and Nurse's Hand Wash Stations.

Our sinks, hand wash stations and fixtures made with antimicrobial copper surfaces take the complexity out of the infection control process while helping to ensure maximum effectiveness. Our products contain antimicrobial copper, the world's most effective antimicrobial touch surface material that kills 99.9% of bacteria*.

Just has been a leading manufacturer of hospital fixtures. We now provide health care products that help kill bacteria* which cause infection, while advancing safety and compliance. Since 1933 our stainless steel sinks and fixtures have been specified for hospitals and healthcare institutions worldwide.

The use of an Antimicrobial Copper surface is a supplement to and not a substitute for standard infection control practices; users must continue to follow all current infection control practices, including those practices related to cleaning and disinfection of environmental surfaces. The Antimicrobial Copper surface material has been shown to reduce microbial contamination, but it does not necessarily prevent cross contamination

*Testing demonstrates effective antibacterial activity against Staphylococcus aureus, Enterobacter aerogenes, Methicillin-Resistant Staphylococcus aureus (MRSA), Escherichia coli O157:H7, and Pseudomonas aeruginosa.
